

Smart Card balance Readers

Product Information ➤

ACS supplies a wide range of balance readers (value checkers) to suit various applications. Our experienced engineers produce software and hardware in-house in which they can deliver in a short lead-time. These portable devices can be configured for different applications such as simple balance checking, currency conversion, viewing transaction records, and identity verification, campus environment (class attendance, Library record, etc.), and more. Our balance readers can also easily be customized to satisfy customer requirement (type of cards to be read, functions of the reader, color, casing, etc.).

ABR balance reader can be used to check the balance on your electronic purse card (e.g. Visa Cash, Mondex, Gemplus cash card, prepaid payphone card (Eurochip 4436), and ePark card. You can also view the latest transactions on your card and use it to show the user information such as name and contact number.

Technical Specification ➤
